
Hot Selling for Acrylic Extruded Polyethylene Sheet - Greenhouse Cooling and Circulation Fan Ventilation Product ZLFJ400/500, Stainless Steel - Fenglong Greenhouse

What is Circulation Fan?

Circulation Fan, also known as Greenhouse Air Cooling Fan, keep your plants and staff safe from heat during the warm summer months. Greenhouse circulation fans promote uniform temperature throughout your greenhouse, cold frames, high tunnel, or commercial warehouse. Improve plant production levels, reduce heat stress, eliminate condensation on walls and ceilings, keep greenhouses and buildings fresher.

FLC Circulation Fan Application:

Since the Greenhouse is a relative close environment , the air in the greenhouse is not easy to flow , and the temperature and humidity in the greenhouse air normally high. It can easily breed various pests and diseases in such an environment. In order to improve the environment inside and keep the air in the greenhouse flowing, Beijing Fenglong meticulously designed and produced the FLC® circulation fan.

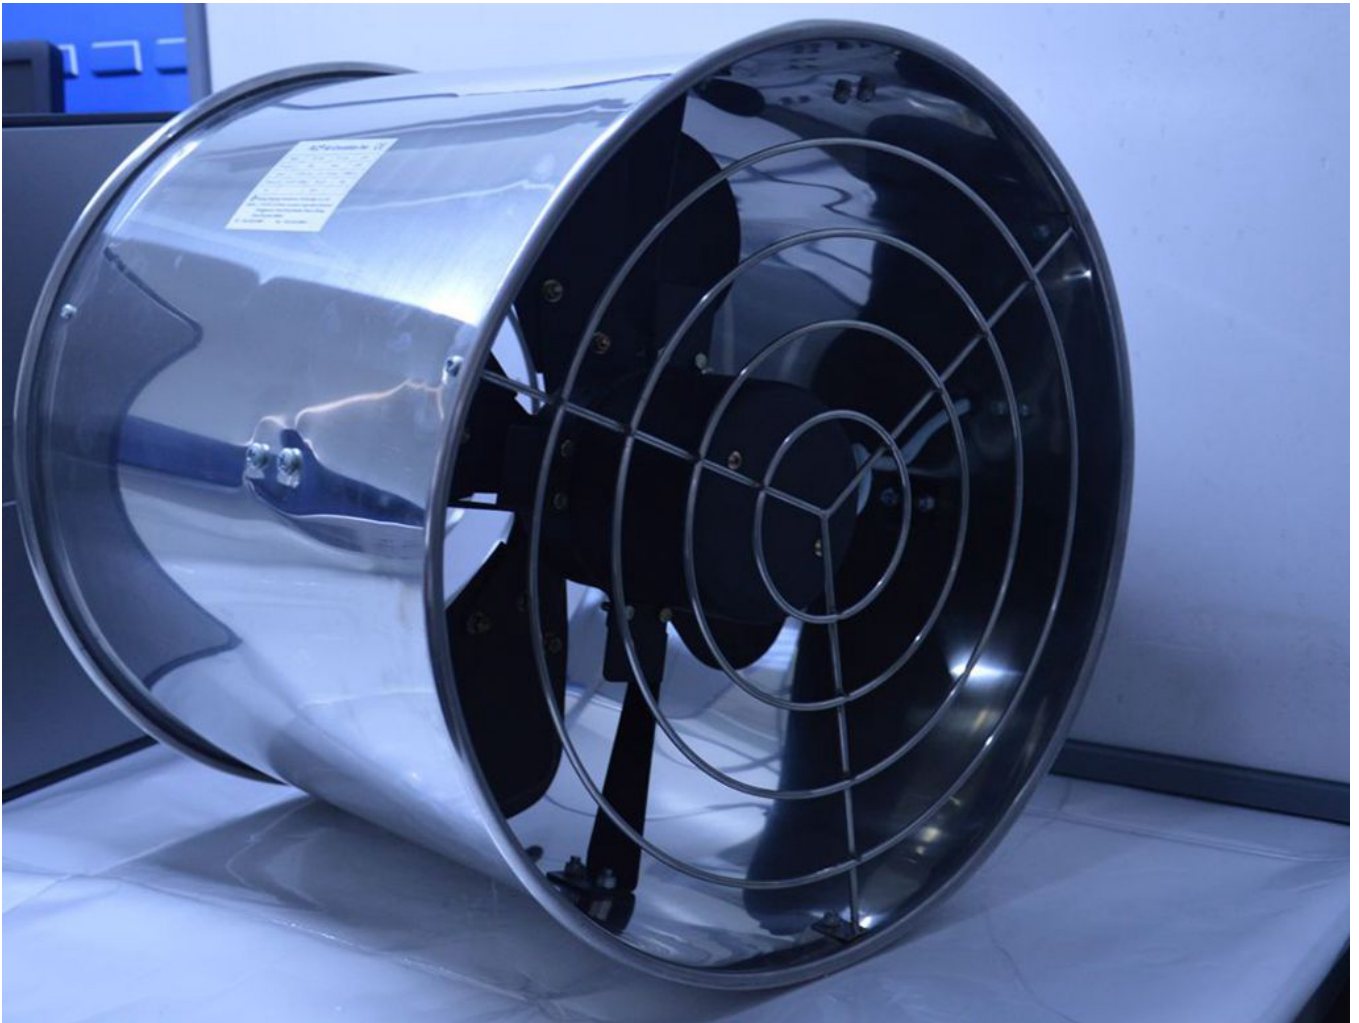

Exported To 23 Countries:

Fenglong FLC® Circulation Fan has been serving customers in 23 countries since 2006.

Help you to beat heat, Simple to install and inexpensive to run

Stainless Steel Casing

Overheat Protection, OHP prevents the device from getting too hot and causing a hazard

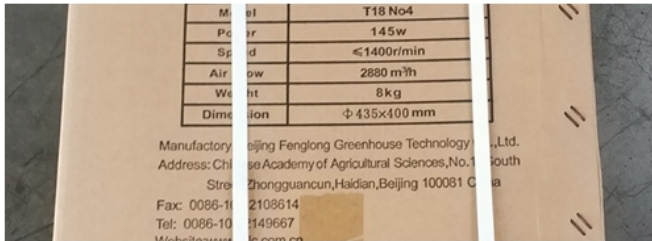

Longer Air Duct, Big air flowing

Good directivity, Long life span, Stable running

Internal and External Package

CE Certificate

3 Years Guarantee

Quality-assured, from purchasing date, within the warranty period, FLC would do full compensate or replace them all for problematic products.
